- Buttons for channel or language selection and navigating through the menu
- Rugged housing
- Optional:
  - Chip card reader
  - 2. language selector instead of a loudspeaker system
  - 2. headphone socket is only active, when there is a second language selector

### DESCRIPTION

As a standard the MCS-D 2073 with removable gooseneck microphone is configured as a delegate station. By using the MCS-D 200 control unit the microphone station can be configured as chairman station with the functions "Priority" (while the chairman is speaking all delegate microphones are muted), "Clear" (all delegate microphones are turned off and the request-to-speak list is cleared), "Next" (the microphone of the next speaker of the request-to-speak list is turned on) and "Previous" (the microphone of the previous speaker is activated again). The microphone station provides an alpha numerical display to indicate menus, information, text messages and an internal phone list as well as menu buttons to scroll through the menu. It also features 10 voting and function buttons for different voting modes and functions (e.g. internal phoning, clock).

Each microphone station provides a four-button-navigator. In normal operation it is used for the channel selection and volume control of the language selector. In the menu mode the buttons are used to select various functions such as displaying the time, microphone station ID or voice communication to another microphone station within the meeting. The channel can be selected for the headphone only; the loudspeaker is permanently set to the original language.

The microphone station is powered by the bus cable and can be placed anywhere in the bus network.

A private voice communication between two microphone stations within a meeting can be established via microphone and headphone.

Optionally the microphone station can be equipped with a chip card reader and/or a second language selector with separate headphone output. The built-in 2-way loudspeaker is disconnected when a second language selector is integrated.
